## CNC machines since 1968

At HURCO® we develop and produce CNC machining centers to satisfy any requirement. As a manufacturer with more than 50 years of experience in the CNC sector, we have a precise appreciation of your own unique production and manufacturing requirements. Our 5-axis machining centers are versatile and can be adapted to specific needs. That's how they help you accomplish easy, fast and precise milling of small and mid-size components with complex geometries.

**Easy**, since our dialog-based CNC control system intuitively guides you from the drawing to the finished workpiece.

**Fast**, with multiple features supporting maximum efficiency of your 5-axis milling machine: dialog-based programming of powerful spindles, the ergonomic MAX®5 control system, and a dual-screen setup so you can see everything you need.

**Precise**, thanks to numerous software functions including zero offset and 3D tool correction.

Our approach is shaped by experience, garnered in partnerships extending over many years with an array of clients representing a wide range of manufacturing sectors. This is how each HURCO® machine tool has been optimized to satisfy your company's diverse requirements. We source the components from premium brands and suppliers who have earned our confidence. Manufacturing processes are in compliance with the highest quality standards: Our quality management system has earned ISO 9001:2015 certification.

## With expertise and passion

HURCO® is one of the largest and highest-performing international manufacturers of CNC machining centers. Our high-quality products have been used in numerous sectors around the globe for more than 50 years, including in aerospace and aeronautics, machine construction, medical technology, power and energy, and transport and computer technology.

At HURCO® you benefit from the unbeatable combination of machine and control system expertise. Our MAX®5 control system is an in-house development designed to minimize your training and programming times. Looking to make your production processes easier, faster and more precise? We would be happy to help you find the right model and will draw up a custom offer for you accordingly. That's how we help make sure your CNC machining center perfectly aligns with your company's production needs. Do you have questions about our machines, the fastest control system in the industry or maintenance and repair of your machining center? Your personal contact at HURCO® Werkzeugmaschinen GmbH will be glad to help you find all the answers you need.

| Max. spindle speed (rpm)           | 12,000        |

The compact and flexible HURCO® 5-axis machining centers for fast and precise machining of small to mid-size workpieces.

### VM 10Ui<sup>PLUS</sup> | VMX 30Ui | VMX 42Ui

- Large A-axis pivot range, from +30° to -110°, facilitates machining of complex 5-axis components
- High rigidity and stability of the linear guides in all three axes
- Rigid cast iron machine bed produced by monobloc method and optimized via static and dynamic finite element analysis (FEA)
- Latest-generation Yaskawa drives
- Direct rotary encoder for rotary axes
- Standard software functions for 5-sided machining: linearization of tool path, zero offset (transformation layer), path-optimized travel of rotary axes
- Optional software functions: Tool Center Point Management, 3D tool correction, tool vector specification & retraction along tool vector

| Max. spindle speed (rpm)           | 12,000      |

The HURCO® 5-axis machining centers for easier machining of complex components. With integrated rotary/swivel table.

#### VC 500i | VCX 600i

- Large B-axis pivot range, from +110° to -110°, facilitates machining of complex 5-axis components
- Integrated rotary table
- High rigidity and stability of the linear guides in all three axes
- Rigid cast iron machine bed produced by monobloc method and optimized via static and dynamic finite element analysis (FEA)
- Latest-generation Yaskawa drives
- Standard software functions for 5-sided machining: linearization of tool path, zero offset (transformation layer), path-optimized travel of rotary axes
- Optional software functions: Tool Center Point Management, 3D tool correction, tool vector specification & retraction along tool vector

# FUNCTIONS WITH ADDED VALUE

## EASY MILLING WITH YOUR CUSTOMIZED MACHINE

You can individually and flexibly equip our machining centers with a wide range of machine options – for customized support in your production scenarios.

### Workpiece position detection

The workpiece zero point is determined electronically both in manual setup mode and fully automatically during the program run. Reduces machine downtime and the risk of manual adjustment errors.

- Determination of workpiece zero point and rotation:
  - Edge
  - Corner
  - Drill hole
  - Cylinder
  - Rectangular recess
  - Cuboid
- Measuring the workpiece

## Tool setting with touch probe

Get extra precision with the electronic measuring system for tools.

- Determination of tool length and diameter by exact measurement
- Tool breakage detection over length and – if the tool is defective – use of a replacement tool
- Tool wear detection and compensation on both length and diameter

## Tool setting with laser

Maximize the accuracy of tool setting using a laser. This option is recommended for small and sensitive tools in particular.

- Determination of tool length and diameter by exact measurement
- Tool breakage detection over length and – if the tool is defective – use of a replacement tool
- Tool wear detection and compensation on both length and diameter

## Production package

The production package includes a chip conveyor for reliable coolant cleaning and chip flushing, providing you with optimal support for the maintenance of your machine. A must-have for machining cast iron, brass, aluminum and comparable materials.

- 1 Paper belt filter
- 2 Pumps for coolant supply from outside and chip flushing
- 3 20 bar pump for internal coolant supply (optional: up to 70 bar)
- 4 Additional coolant tank (up to 1,350 l)

## Bypass filtration system for ICF

Effectively reduce the maintenance effort for your ICF system with a gravity belt filter for cleaning the cooling lubricants. Highly recommended for machining cast iron, brass, aluminum and comparable materials.

- 1 Gravity paper belt filter
- 2 280 l coolant tank
- 3 20 bar pump for internal coolant supply (optional: up to 70 bar)

## Rotary tables

Add a fourth axis to your SWi series 5-axis machining center with one of our rotary tables.

| Rotary table (mm)    | MR 120 | MR 160 | GT 200 | GT 250 | GT 320 |
|----------------------|--------|--------|--------|--------|--------|
| Face plates Ø (mm)   | 128    | 165    | 200    | 250    | 320    |
| Center height (mm)   | 120    | 140    | 140    | 180    | 225    |
| Spindle passage (mm) | 32     | 40     | 45     | 70     | 105    |

# EVEN MORE OPTIONS FOR DOERS

## **Cooling air via coolant nozzles:**

Choice of cooling emulsion or cooling air via coolant nozzles. Programmable as "Coolant 2" or via M function

## **Cooling air via spindle**

As above, but supplied through the spindle. Prerequisite: Optional "internal coolant feed (ICF)"

## **Rotoclear**

Rotating viewing window for a clear view of the workpiece when working with coolant emulsion

THE CONTROL  
SYSTEM BY DOERS  
FOR DOERS

# MAX<sup>®</sup> 5

HURCO<sup>®</sup> CNC control combines powerful MAX<sup>®</sup> 5 hardware with user-friendly WinMax software and optional features such as Solid Model Import.

## YOUR BENEFITS AT A GLANCE

- **User-friendly operation.** Perfection can be this easy – with intuitive plain text conversational programming, you can intuitively set the control system according to your requirements.
- **Minimal time required.** Use of the control system can be learned quickly without any programming knowledge at all. It optimally supports your employees in achieving faster programming times with short, clearly arranged programs.
- **Individual configuration.** Choose from a variety of features (e. g. Solid Model Import) specific to your needs to ensure that your HURCO<sup>®</sup> control system perfectly meets your needs.
- **High profitability.** Even the production of highly complex parts and a higher capacity utilization of your operation can be mastered in no time.
- **Measurable productivity.** The functions of the control system and numerous automation features demonstrably increase your capacity.
- **Greater employee satisfaction.** Automate processes and give your employees more time for more complex activities.

# MAX<sup>®</sup> 5 CONTROL SYSTEM

## A dream for users from design to result.

With MAX<sup>®</sup> 5, you can process sketches and drawings, read solid models for program creation, and program directly on the machine without an additional programming station.

## Tailored to your needs in every respect

- Ergonomic, rugged design
- Pull-out keyboard with adjustable inclination
- Height-adjustable, retractable console for minimal footprint<sup>1</sup>
- CAD/CAM support
- Solvent-resistant keyboard constructed in ABS polycarbonate
- Rotary override knobs in brushed stainless steel

The versatility of the HURCO<sup>®</sup> control system makes complex work a cinch. The ability to quickly import data meshes with the multitude of machine options.

Gröbner Fertigungs GmbH

# SOLID MODEL IMPORT

**Simply gain greater flexibility.** With the advanced Solid Model Import function, you can import DXF and STEP data directly and import free-form surfaces as conversational data sets so that they can be directly produced on the machine.

# WINMAX<sup>®</sup> 5 SOFTWARE

**Supported by the best.** For the maximum performance of your HURCO<sup>®</sup> machine, we developed WinMax<sup>®</sup>5, a software program that is aligned exactly with the performance data of our machine tools and your needs as the user.

## Spotlight on WinMax<sup>®</sup> 5

- **Clearly displayed.** Perform solid-model programming directly on the graphic display screen with simultaneous simulation of machining<sup>3</sup>
- **Supportive.** The software independently creates machining data sets based on automatically recognized contours and drilling patterns.<sup>2</sup>
- **Practical.** Recess and drill hole depths are automatically detected and stored in the data set.<sup>3</sup>

<sup>1</sup> Depending on model

<sup>2</sup> Only with Solid Model Import or DXF

<sup>3</sup> Only with Solid Model Import

## How does the feature benefit you?

- **Fast 3-axis, 4-axis and 5-axis machining.** Using Solid Model Import, you can program right at the control system – simply, with the help of the solid model.
- **Time-saving.** Import solid models right at the control system – without the hassle of creating 2D drawings with dimensions.
- **Better overview.** You can switch between the solid model for programming and the simulation of the generated machining in the graphic view or display both in overlapping form.

### Spare parts services & next day delivery

High spare parts availability at our Munich central warehouse and fast delivery of our spare parts means that your operation gets back up and running quickly from repair-related downtime. On request, we can also replace your old spindle with either a reconditioned or new spare part.

Mon. – Thurs. 8:00 a.m. – 5:00 p.m. | Fri. 8:00 a.m. – 4:00 p.m.

### Service

Our experienced service technicians will support you on site or via remote maintenance in the maintenance, care or repair of your HURCO® machine tools.

Phone +49 89 905 094 - 44 | [service@hurco.de](mailto:service@hurco.de)  
Mon – Thurs 7:00 a.m. – 5:00 p.m. | Fri. 7:00 a.m. – 4:00 p.m.

## Training & free tutorials

We give you the knowledge for getting the most out of your HURCO® machine and the MAX®5 control system – with customized on-site training for every user level and our free instructional videos on YouTube.

**HURCO® on YouTube:**
